Ukraine smart grid system project

Will Ukraine synchronize with the EU power grid?

The World Bank has already been working to prepare Ukraine's power infrastructure for synchronization with the EU power grid under the ongoing Second Power Transmission Project (PTP2). This project supports Ukraine in the introduction of smart grid technologies and wholesale electricity markets.

How will the World Bank help Ukraine synchronize its power grid?

The World Bank's financing will help mitigate technical risksassociated with synchronizing Ukraine's power grid with the European electricity grid and will help decarbonize it by facilitating greater integration of renewable energy.

What happened to Ukraine's electrical grid?

First, starting in December 2015, were cyberattacks that damaged Ukraine's electrical grid. Then, in the spring of 2017 were election interference targeted at France's elections.

What is power grid synchronization?

Power grid synchronization is a national strategic objective that will result in the creation of competitive and transparent electricity markets aligned with EU regulations and market practices.

On 02 May 2024, the UN Global Compact in Ukraine, together with ExPro, held an online discussion "Smart Grid Concept and its current state of implementation in Ukraine" as part of ...

DTEK Group and Schneider Electric have announced a memorandum of understanding (MoU) to bring innovative energy solutions to Ukraine with a focus on smart infrastructure, grid modernisation, digitisation and industry solutions.

The project, which still needs to be approved by the Ministry of Energy, involves the construction of a "smart" network consisting of 20,000 km of new overhead and underground cables, 250 substations, 6,000 transformers, and the ...

For Zuiev, the digital twin - which the company hopes to expand regionally next year - is but one component of their plans to bolster the energy system with digitalisation. Another, is installation of smart meters. "We ...

With 189 member countries, staff from more than 170 countries, and offices in over 130 locations, the World Bank Group is a unique global partnership: five institutions working for sustainable solutions that reduce poverty and build shared prosperity in developing countries.

Ukraine smart grid system project

The project, which still needs to be approved by the Ministry of Energy, involves the construction of a "smart" network consisting of 20,000 km of new overhead and underground cables, 250 substations, 6,000 transformers, ...

DTEK is planning a EUR2.4 billion (US\$2.6 billion) smart metering and smart grid upgrade in the war-hit region around the capital, Kyiv. The aim is to build a smart grid capable of withstanding military assault while at the same time accelerating Ukraine''s energy transition.

For Zuiev, the digital twin - which the company hopes to expand regionally next year - is but one component of their plans to bolster the energy system with digitalisation. Another, is installation of smart meters. "We have completed the digital twin of Kyiv region already... it"s a really good start for future development.

The World Bank has already been working to prepare Ukraine's power infrastructure for synchronization with the EU power grid under the ongoing Second Power Transmission Project (PTP2). This project supports Ukraine in the introduction of smart grid technologies and wholesale electricity markets.

So as winter sets in, Ukraine is rushing to rebuild its grid and restore its power generation. But the new grid will be markedly different from the old. The country's developers are aiming to make it both more resilient and more modern through the use of distributed energy resources (DER), digital twins, and smart meters.

On 02 May 2024, the UN Global Compact in Ukraine, together with ExPro, held an online discussion "Smart Grid Concept and its current state of implementation in Ukraine" as part of the Ukraine Energy Initiative.
