

What energy storage systems does NIO have

What is Nio's new energy storage system?

The newly designed energy storage system replaces the previously used 70-kWh battery pack with NMC cells. Nio claims that the redesigned battery offers greater cold-weather range and more accurate state-of-charge (SoC) estimation thanks to patented technologies, while still maintaining battery performance at the same level as an NMC-only battery.

How many battery swapping stations does Nio have?

NIO has 1,383 battery swapping stations across China and Europe. NIO users have collectively achieved a 10 billion kilometer distance landmark in 1,762 days since the brand's launch. The Chinese EV startup has grown fast, and so has its battery swapping network. 60% of its drivers have used battery swapping stations.

Does Nio have a battery lifecycle health OS?

NIO already operates the industry's first battery lifecycle health OS across its swap network, which monitors the temperature, intensity, and charge frequency of the battery packs to collect data on what conditions affect its lifespan most.

Does Nio offer flexible EV battery swaps?

Flexible battery swaps for 98%* of European users PSS 3.0, NIO's third-generation PSS technology, is already bringing rapid Smart EV battery swapping within reach for NIO users across Europe, with over 30 PSS locations now available across Denmark, Germany, Norway, the Netherlands, and Sweden.

How many replacement batteries can a Nio battery hold?

They hold up to 23 replacement packs, which now recharge faster thanks to a newly developed liquid-cooled charging cable. The approach removes the need for drivers to wait for the battery to charge and gets them on the road faster. Nio has installed 2,432 Power Swap Stations in China to date, as well as 22,633 traditional charging stations.

What is Nio PSS 3?

NIO's third-generation PSS 3.0 locations are equipped with a 2-megawatt hour (MWh) energy storage system, designed to feed energy back into the grid if required. PSS 3.0 users will also benefit from an even faster battery swapping experience, available in less than five minutes and accelerated by up to 20%.

In Europe, the UK and the USA, vehicle to grid (V2G) solutions are getting increasing focus, whereby even some fast charging stations with stationary energy storage are using bidirectional charging to feed energy back
