

# Where is solar power generation in Japan

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

How many solar power plants are there in Japan?

In 2021, there were over 3.7 thousand solar power plants in Japan - more power stations than any other renewable energy source in the country (Miyagi prefecture is leading with 565 electric power stations). Moreover, solar energy has recently overtaken hydropower in Japan as the biggest renewable energy source in electricity generation.

Why is solar energy growing in Japan?

Moreover, solar energy has recently overtaken hydropower in Japan as the biggest renewable energy source in electricity generation. All of this points to the growth of the Japanese solar energy industry. It is likely that the trend will continue as the government keeps promoting the transition to nuclear and renewable energy sources.

Who makes solar power in Japan?

In line with the significant rise in installations and capacity, solar power accounted for 9.9% of Japan's national electricity generation in 2022, up from 0.3% in 2010. Japanese manufacturers and exporters of photovoltaics include Kyocera, Mitsubishi Electric, Mitsubishi Heavy Industries, Sanyo, Sharp Solar, Solar Frontier, and Toshiba.

Does Japan need solar energy?

This will need to dramatically increase for Japan to stay aligned with its renewable energy and decarbonisation goals. Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals.

Is solar energy the future of Japan's Energy Strategy?

Solar energy in Japan is emerging as a cornerstone of Japan's strategy to meet its ambitious long-term sustainability goals. The Sixth Strategic Energy Plan aims for carbon neutrality by 2050 with an interim goal of 36-38% of energy from renewables by 2030.

The research team looked at solar facilities in Japan with a power generation capacity of at least 0.5 megawatts, and put together a package of digital data on them. The "Electrical Japan" database, which has basic ...

Share of renewables to electricity generated in Japan. The percentage of total electricity generated in Japan (including on-site consumption) by power source in 2023 was estimated from the Electricity Survey Statistics

...

This report is the follow-up to a report we published in 2019, "Solar Power Generation Costs in Japan: Current Status and Future Outlook" (the "2019 report"), and it analyzes the most recent ...

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic ...

OverviewSolar manufacturing industryGovernment actionSee alsoExternal linksSolar power in Japan has been expanding since the late 1990s. The country is a major manufacturer and exporter of photovoltaics (PV) and a large installer of domestic PV systems, with most of them grid connected. Solar power has become an important national priority since the country's shift in policies toward renewable energy after the Fukushima Daiichi nuclear disaster in ...

As a result of utilizing the limited land, the solar power generation capacity per square kilometer of Japan's total land as well as its flatland ranks 1st among major nations. Electricity generated by renewable ...

Solutions are emerging to conquer solar power's shortcomings, namely, limited installation sites and low-capacity utilization rates. Japan is spearheading the development of two promising ...
