

Which fire extinguisher is better for energy storage container

Which type of fire extinguisher is best?

Carbon dioxide(CO₂) This type of extinguisher is most suitable for class B and electrical fires. They contain pure,compressed CO₂ (carbon dioxide) gas which is discharged through a horn as a strong jet of gas. These are often the most popular choice of fire extinguisher,and work by starving the fire of oxygen and therefore putting it out.

Are portable fire extinguishers effective?

No single extinguisher can be used to tackle every fire,and because each type of fire extinguisher has different categories of fire on which it is effective,selection can be a minefield. The good news is that portable fire extinguishers are effectiveand are saving lives.

What are the disadvantages of a fire extinguisher?

A drawback is that they cannot be used on burning fat or oil (Class F), burning metals (Class D), burning liquids (Class B) or electrical appliance fires. The newest type of extinguisher. These very powerful, but smaller, devices exude an ultra-fine mist of microscopic 'dry' demineralised water particles.

Are CO₂ extinguishers safe?

They can asphyxiate in confined spaces,and they are not suitable for deep fat fryers,as the strong jet from the extinguisher can carry the burning fat out of the fryer. Fires can quickly re-ignite once the CO₂ has dissipated into the atmosphere,so they do not offer post-fire security. CO₂ extinguishers are quite expensive.

Can a fire extinguisher be used on multiple fires?

It is known as an "ABC" extinguisher or a multi-purpose extinguisher as it can be used on multiple fires(Type A,B and C). Hence,it can be used on fires involving wood,textile,petrol,diesel,flammable gases like methane and butane and also electrical fires up to 1000V. Caution:
