How often do solar panels degrade?

Solar panel efficiency is higher than ever, but the amount of electricity that panels can generate still declines gradually over time. High-quality solar panels degrade at a rate of around 0.5% every year, generating around 12-15% less power at the end of their 25-30 lifespan. But, what are the reasons for solar panel degradation?

Why do solar panels lose power over time?

Over time, solar panels lose their ability to absorb sunlight and convert it into solar energy due to factors such as hotter weather and the natural reduction in chemical potency within the panel. This is what is referred to as the "degradation rate". The lower the degradation rate, the better the panel.

How long do solar panels last?

Most reputable manufacturers offer production warranties for 25 years or more. The average break even point for solar panel energy savings occurs six to 10 years after installation. If the panels continue to produce at a high level for another 15 years after that, you will end up saving thousands of dollars during the solar panels' lifespan.

How much do solar panels deteriorate a year?

Appropriate degradation rates of solar panels are estimated at 0.5% per year considering a well-maintained PV system featuring ideal conditions. However, solar panel degradation rates can reach up in some extreme cases, going as high as 1.4% or 1.54% per year.

Do solar panels go through a natural degradation process?

Yes, a solar panel goes through a natural degradation process as part of its lifecycle. This means that its ability to convert daylight into electricity is very slightly reduced each year. Why do solar panels degrade? Solar panels degrade mainly because of exposure to the elements.

Can solar panels break?

The materials and components including the solar glass, aluminum frame, and solar cells used in the panel can break if they are of low quality. Some manufacturers reduce the amount of aluminum they use in the frame to keep prices down, and thinner frames are more vulnerable to damage.
