The Åland electric grid relies on a combination of imported power and local renewable energy, primarily wind power. The grid is connected to both Sweden and Finland via high-voltage subsea cables, ensuring a secure energy supply.

A fully sustainable energy system for the Åland islands is possible by 2030 based on the assumptions in this study. Several scenarios were constructed for the future energy system based on various combinations of domestic production of wind and solar photovoltaic power, expanded domestic energy storage solutions, electrified transport, and ...
